Overview:

Developed by the Software Engineering Institute (SEI), the CERT®-Certified Computer Security Incident Handler (CSIH) certification program has been created for incident handling professionals, computer security incident response team (CSIRT) technical staff, system and network administrators with incident handling experience, incident handling trainers and educators, and individuals with some technical training who want to enter the incident handling field. It is recommended for those computer security professionals with three or more years of experience in incident handling and/or equivalent security-related experience. As a partner with the Software Engineering Institute, Outbreak Security is proud to offer both the courses and examinations required to obtain the CSIH certification.

CSIH Benefits:

Obtaining a CSIH certification provides you with the foundation knowledge and skills to be highly successful as a leader or member of a computer security incident response team. Upon completion of the CSIH certification you will

- be recognized as a Computer Security Incident Handler professional by the Software Engineering Institute's CERT program and your peers in the global incident handling community
- be able to demonstrate that you have attained knowledge specifically focused on computer security incident handling activities
- be trained to handle diverse aspects of incident management ranging from using technical expertise to prepare for, detect, analyze, and respond to security events to applying best practices in operating a team
- have achieved the knowledge, skills, and abilities to be a highly successful security professional

CSIH Course Requirements:
